

The RILEY civil team works closely with our geotechnical and water resources professionals to ensure seamless integrated solutions are delivered to private, corporate and government clients.

Projects range from subdivisions, commercial property developments and council infrastructure to wind farms, water conveyance and hydro development.

Our services range from project management and feasibility studies through to detailed design, consenting and physical works implementation and include:

- ❖ Infrastructure – roading (including geometric design), pavements, piped reticulation design
- ❖ Land Development – residential, commercial subdivisions (urban, rural, green field and brown field development)
- ❖ Stormwater Management – hydrologic and hydraulic analysis, quantity and treatment design and consenting
- ❖ Wastewater Management – on-site wastewater design and consenting
- ❖ Expert Evidence – land development consenting, forensic engineering
- ❖ Earthworks – design, sediment and erosion control, consenting
- ❖ Construction Management – contract preparation, tendering, contract administration, site supervision, cost control and reporting.

The RILEY team is committed to delivering a quality, cost-effective service. We have high professional standards, ethics and integrity, all of which are backed up by our internationally recognised ISO 9001 certification.

For further information on the services we can provide refer to our web site or please contact us.
